CLEAN WATER ACCESS & QUALITY IN PAKISTAN

- A media-report in December 2024 cited that only ~39% of the population has access to safe water in Pakistan. - **Dawn**
- Pakistan generates almost 2 million tonnes of plastic waste per year, equating to “more than 8 kg per capita per year” in one estimate. - **SWITCH-Asia**
- The proportion of Pakistan’s population using safely-managed drinking water services (i.e., water from an improved source, accessible on premises, available when needed and free from faecal/chemical contamination) was reported at 50.6% in 2022. - **World Bank Data**
- One review estimates that ~63% of people in Pakistan are without safe drinking water. - **As-Siraj**
- On water availability: per-capita water availability is projected to drop to ~660 m³ by 2025 under current trends. - **ResearchGate**

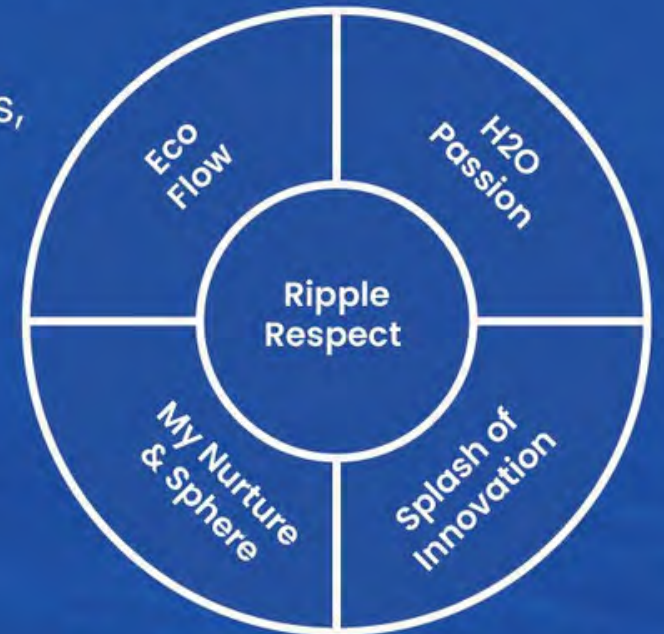

MISSION & VISION

At MyWater, our mission is to revolutionize hydration by making clean, sustainable, and high-quality water accessible to everyone—without plastic waste. We believe in a future where tap water is transformed into pure, refreshing still and sparkling water at the touch of a button.

By eliminating single-use plastic bottles and reducing carbon footprints, we are not just providing water; we are driving a movement towards a healthier planet and a smarter way to drink.

With every sip, we empower individuals and businesses to make environmentally responsible choices—because great water shouldn't cost the Earth.

Join us in redefining hydration for a greener, cleaner, and smarter tomorrow
